

PERFORMANCE ENHANCEMENTS

Sustainable Solutions is Our Ongoing Commitment

Concept Part Solutions is dedicated to extending the lifetime of your maturing semiconductor manufacturing equipment. As your toolsets age and new processes emerge, we pursue every opportunity through our Continuous Improvement Program (CIP) to offer important enhancements that increase the reliability, productivity, and performance of your install base.

SAC Filter Relocation Upgrade

SAC Filter Rack

SAC Filter

Simplifying maintenance procedures for legacy semiconductor equipment helps to extend equipment lifetimes and improve availability. CPS is happy to announce the release of the SAC Filter Relocation Upgrade to simplify this Sabre xT PM procedure. This upgrade applies to SAC version C only.

Original placement of the SAC filters on the far left of the SAC filter shelf make servicing the filters very difficult. The CPS SAC Filter Relocation Upgrade moves the SAC filters to the front of the SAC pump shelf where each filter can be easily accessed and serviced independently. The upgrade kit requires no drilling to mount the filter holding bracket and includes pre-bent tubing segments for easy installation.

The replacement filter kit PN is CPS-04-10209 and is available for the SAC version C configuration. For end users still using SAC versions A or B, additional engineering would be required; please contact CPS if a kit is needed for these versions.

Upgrade Benefits

- Improved availability of system; less maintenance downtime
- Reduced consumable cost due to ability to change individual filters
